

# COVERS *in Play* Auto Pool Reel®

## FEATURES

### AUTOMATIC DEPLOYMENT SYSTEM

No more manual pushing and pulling on a pool cover. Just push the button.

### NO TRACKS REQUIRED

The Covers in Play Auto Pool Reel patent pending design deploys the cover over the water in constant alignment by using edge guides in the deployment system. They ensure smooth and repeatable rolling of the cover on and off the reel and years of hassle free service life.

### ELECTRICALLY DRIVEN

With a simple push of the button the Cover will automatically cover or uncover the pool. Low voltage motors automatically wind and unwind the cover on the main reel, replacing the manual cranking of older systems. All electrical components are encased in protective housings.

### THERMAL BLANKET COVER

The Covers in Play Thermal Covers are made from thermal cross linked polyethylene foam that is laminated with 5 mil poly top surface. It is pool chemical and UV resistant. The blankets have superior strength and durability and are resistant to tearing, puncturing and ripping. The Thermal Cover comes with its own 3 year warranty.

### SAFETY KEY

Added safety is ensured with the use of a safety key to power up the system. It will not power up without it.

### ADJUSTABLE EDGE GUIDE ARMS

The adjustable Edge Guide Arms allow the main reel to sit back from the pool edge as required to account for any contour of the coping.

### EASY ASSEMBLY

The Main Reel is made from telescoping aluminum tubes that adjust to fit the pool width. These tubes are simply attached to the End Supports and ready for connecting the Cover.

### END SUPPORT WHEELS

Each End Support can be rolled into position on the pool deck independently at the edge of the pool coping prior to locking in final position. The wheels at each end also allow the Auto Pool Reel to roll out of the way when not in use.

### SECURE INSTALLATION

The Covers in Play Auto Pool Reel system is secured to the pool deck to ensure smooth operation and safety under all conditions. The End Support locking system can be easily disengaged to move the system away for maintenance, deck cleaning or end of season storage.

## ADDITIONAL ADVANTAGES

- Reduces cleaning time by keeping dirt and debris out of the pool.
- Allows for continued, repeated use, with ease of operation.
- Contributes to pool yard aesthetics, by rolling up on a reel.
- Solar/Thermal blanket saves on your heating costs
- Trackless system allows free and clear coping areas around pool deck
- Use your existing cover

COVERS *in Play* designs, manufactures automatic pool covers and retractable enclosures, featuring innovative designs and automated systems that are unique in the industry.

COVERS *in Play* products are designed to the highest engineering standards for all climatic conditions resulting in the highest quality systems in the industry. Each system is engineered to ensure safety and ease of use in a graceful and elegant system. Only the highest quality materials are used to ensure reliability, durability and extended service life.
