

COVERS *in Play*

Automated retractable enclosures for pools, spas and patios

Enjoy Life - Inside and Out!™

Enjoy the beauty of every season - whatever the weather!

It is becoming increasingly common to create an outdoor living space that provides the same comforts and amenities that we find indoors. Patios are being appointed with luxurious furniture and grills are being transformed into outdoor kitchens. Stereo systems, potted plants, garden lighting and other accessories are being used to create an outdoor oasis.

Retractable enclosures are another element that can be used to transform outdoor living spaces. Our enjoyment of the outdoors is largely dictated by favourable weather. Retractable enclosures eliminate the weather factor by allowing you to enjoy the benefits of an indoor sunroom with the flexibility of being able to enjoy the outdoors as well.

Get the best of both worlds!

No pushing required!

Opening a *COVERS in Play* enclosure is as easy as the push of a button! With our automated drive system, no manual pushing is required. Simply push a button and the enclosure will easily open or close! Only *COVERS in Play* offers this unique feature!

Automated Pool Controls!

Automate your pool and enclosure settings with a sophisticated Digital Control Panel. The control panel includes a touchscreen display that will monitor and maintain various settings within the enclosure such as the pool pump and heater, pool and air temperature, lighting and water features.

Go Green!

Retractable enclosures have several environmental benefits: they increase ambient temperatures by trapping solar heat, provide protection from the harmful effects of UV rays, reduce the need for pool chemicals and reduce water loss through evaporation.
